### GARDENING

#### REGULATIONS:

1. NOTE: To insure a fresh and attractive exhibit, gardening is divided into two shows. Please check entry deadlines and judging times at the beginning of this department.
2. Containers will be furnished to display entries.
3. The Superintendent shall have the right to remove from exhibition, at any time, any exhibit or any part thereof which is unsightly.
4. Duplicates must be provided for all collections. Vegetables judged in individual classes cannot be used in Division 14 & 15.

#### EXHIBITOR TIPS!

Judging factors: quality and uniformity are basic conditions that are used in judging. Type refers to specimens that are regular and typical of the variety. All vegetables of an entry must have the best characteristics of a kind. Quality includes primeness for intended use, size, tenderness, cleanliness and freedom from blemishes, damage or defects. Uniformity relates to each specimen having the same shape, size and colors as the others in a given exhibit.

To obtain the best vegetable for home use or exhibition, the vegetables need adequate substance (NPK) nitrogen, phosphorus and potassium plus secondary and trace elements. Water, sunlight, air and suitable climate are also necessary. The gardener will need to space the seed or thin the plant later to allow growing space. He should water evenly, control insects and diseases, cultivate and hillup the root crops to protect them. For exhibition, all vegetables must be clean and free from insect damage. Wash them gently to avoid injury or damage and, if storage is necessary, place in a cool, moist place. Leave approximately three-fourths inch of top on root crops such as beets and carrots and about the same amount of root on above ground crops such as cabbage, chard, celery, etc.

Onions, Dry—About 8 days before exhibition lift from garden. Just above bulbs, bend top over finger when limp, twist slightly. Spread out in a warm, dark, ventilated place to dry. At fair time, remove tops, lightly rub off any loose outer skin and dry roots. Do not damage root node.

Onions, Green—Lift just prior to exhibition, avoiding damage to root node. Trim roots and tops. Remove outer layers of skin to get dirt off and wash. Choose plants that are well blanched or white.

Potatoes—After digging allow them to dry 20 minutes or so to set the skin, then wash gently. Avoid rough handling.

Rhubarb—Take firm hold on stalk, gently bend toward you, then with a quick pull the stalk will come loose at base around the crown. To remove the leaf, cut from point a half inch from each side of stem in triangle pattern to enter leaf vein above. Leave base of stem intact.
